Project Design Phase-II Solution Requirements (Functional & Non-functional)

| Date | 20 June 2025 |
|---------------|---|
| Team ID | LTVIP2025TMID56954 |
| Project Name | FreelanceFinder: Discovering Opportunities, |
| | Unlocking Potential |
| Maximum Marks | 4 Marks |

Functional Requirements:

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task) |
|--------|-------------------------------|--|
| NFR-1 | Usability | Intuitive UI for freelancers and clients using React.js, |
| | | Bootstrap, and MUI |
| NFR-2 | Security | Secure login, data protection, and admin oversight |
| NFR-3 | Reliability | Consistent project handling with error reporting |
| NFR-4 | Performance | Optimized backend APIs and database queries using |
| | | Node.js and MongoDB |
| NFR-5 | Availability | 24/7 availability with real-time notifications |
| NFR-6 | Scalability | Easily extendable for growing user base and future |
| | | modules |

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description |
|--------|----------------------------|---|
| NFR-1 | Usability | The platform should offer an intuitive and user- friendly interface for freelancers and clients. Key |
| | | actions such as posting projects, bidding, messaging, |
| | | and submitting work should be easily accessible with |
| | | minimal training. |
| NFR-2 | Security | The platform must enforce secure authentication |
| | | mechanisms (e.g., encrypted passwords, token- |
| | | based login). All user data, transactions, and |
| | | communications should be protected against |
| | | unauthorized access and breaches. |
| NFR-3 | Reliability | SB Works should ensure consistent and error-free |
| | | performance. Critical operations like bidding, project |
| | | submission, and payment tracking must function |
| | | reliably without loss or corruption of data. |
| NFR-4 | Performance | The application should maintain fast response times |
| | | (under 2 seconds for 95% of requests). Backend |
| | | services must handle concurrent requests efficiently |
| | | during peak usage. |
| NFR-5 | Availability | The platform must be accessible 24/7 with minimal |
| | | downtime. Scheduled maintenance should be |
| | | communicated in advance, and failover systems |
| | | should be in place to ensure continuity. |

| NFR-6 | Scalability | The system should be designed to support |
|-------|-------------|---|
| | | increasing numbers of users, projects, and |
| | | interactions without performance degradation. |
| | | Infrastructure should support horizontal and vertical |
| | | scaling. |
| | | |
